OnGuard<sup>™</sup>  
Chest X-ray CAD

OnGuard™ computer-aided detection (CAD) for chest X-rays identifies nodules that may be early-stage lung cancer.<sup>1</sup> OnGuard's superior marking capability offers minimal false positives and improves nodule detection.<sup>2</sup>

#### Key Advantages

- Improves detection of 9–30 mm nodules<sup>2</sup>
- Marker scales to reflect the nodule size without obscuring the boundary
- Low false positive rate and improved sensitivity for optimal performance
- Automatic display of CAD markers on existing PACS reading workstation for enhanced workflow efficiency
- Universal PACS connectivity for a quick and seamless installation
- Requires NO additional radiation dose or patient procedures
- Uses existing chest X-ray – No additional hardware necessary
